Comments:

My family and I have visited Yellowstone National Park and the surrounding area. We consider the area to be one of America's most valuable wilderness experiences. For this reason, we support the wilderness recommendations in Alternative D of the Revised Draft Forest Plan. We ask that these recommendations be improved by adding the entire 230,000 wild, roadless acres of the Gallatin Range as Recommend Wilderness in the final forest plan.

The plan should prohibit all motorized and mechanized uses, and any other activities not consistent with wilderness protection, in the Recommended Wilderness areas. We need to preserve their wilderness qualities until Congress acts on the wilderness recommendations.

The draft plan has little direction for administering the Absaroka-Beartooth and Lee Metcalf Wildernesses. The current wilderness management plans allows destructively large groups of up to 25 head of stock (horses and mules) and 15 people in most areas. Research shows that impacts increase significantly when group-sizes exceed eight head of stock and 12 people. The Forest Service should reduce group size limits accordingly so as to protect all Wildernesses within the forest from harm.

The forest plan should put an end to ecologically destructive fish stocking in naturally fishless wilderness lakes. Such practices significantly alter the areas' natural conditions.

The plan needs to address the issue of human and pack animal feces that contaminate lakes and streams on the Beartooth Plateau in the Absaroka-Beartooth Wilderness. Eliminating fish stocking would likely go a long way toward solving this problem, but additional measures must be included if needed.
