Comments:

Inventoried roadless land boundary on the DEIS map for alternative D appears to be wrong. At the northern end of the Gallatin Range where the roadless joins the northern end of the HPBH WSA, the roadless area extends along the full width of the section. On the DEIS map, they are shown as joining only along the section corner. See the attached file for an accurate depiction.

This connection is important to wildlife that travel from the Gallatin to the Bridger Range and needs to be kept roadless.
