Custer Gallatin National Forest Management Plan

May 9, 2019

Forest Plan Revision Team

PO Box 130

Bozeman, MT 59718

Dear Revision Team,

Yellowstone National Park is an American treasure that was established with great wisdom to ensure that its bounty would be protected for wildlife and future generations. As tourism grows, development encroaches and climate change threatens the park it is imperative to take action to increase and improve protections and buffer zones to help protect the ecosystem. The Absaroka Beartooth and Madison, Henrys Lake, and Gallatin geographic areas provide valuable wildlife habitat, headwater streams, and diverse recreational opportunities within the Greater Yellowstone Ecosystem. The Custer Gallatin National Forest management plan must place a priority on protecting their natural resources in a manner that enhances Yellowstone.

Booming urban growth, advances in recreation technology, and climate change related impacts are putting more and more pressure on our public lands. It is critical that the new management plan address these threats by cementing our recreation footprint in place, protecting habitat and wildlife populations, and implementing strategies to better understand and adapt to a changing climate.

I support the full incorporation of the Gallatin Forest Partnership (GFP) Agreement into the plan for the Gallatin and Madison ranges. However, while alternative C incorporates parts of that agreement it falls short in that it does not accurately reflect the GFP's recommendations for wildlife protections or recreation monitoring. In addition, it is also essential that we protect and enhance other areas, including wildlife linkage areas and existing wilderness, and include enforceable climate change components. It is imperative to establish protected wildlife corridors to aid diversity and sustainability for wildlife.

The management plan must include:

Ensure wildlife connectivity in portions of the Madison, Henrys Lake, and Gallatin Geographic Area that aren't otherwise protected by the grizzly bear recovery zone. The Madisons are critical for wildlife movement to areas beyond the National Forest. Habitat protections for grizzly bears must extend wherever population health is monitored and into areas important for connectivity. Grizzlies must also be designated as a Species of Conservation Concern.

Plan components must support a year-round self-sustaining bison population within tolerance areas on National Forest System lands. Domestic livestock grazing should be eliminated from these areas. West Pine and Porcupine Buffalo Horn backcountry areas must mirror Cabin Creek Wildlife Management Area in wildlife protection and wild character plan components.

Recreational use must be monitored more extensively by area, and standards must ensure that increasing recreation is balanced with wildlife protection.

Manage existing wilderness areas in line with the 2020 Vision.

Given the uncertainties of climate change, monitoring questions for vegetation, invasive species, aquatic resources, fire, and more must explicitly assess the effects of climate change and guide adaptive management as required by the 2012 planning rule (219.12(a)(5)(vi)). In addition to the 30 rivers recommended as eligible for Wild and Scenic designation, include Taylor Creek, Hellroaring Creek, and the South Fork of the Madison due to their outstanding wildlife values.

It is important to see the Custer Gallatin National Forest taking a fresh look at our ecosystems and the many species that depend on them. The Draft Plan and DEIS includes many strong points, and with some revisions the new management plan will be an important tool to guide decades of sustainable forest management.

Thank you for your work on this important issue.

Respectfully,

Mr. Larry Lambeth
