Plan Revision for Custer/Gallatin Forests

Dear All,

Thank you for your work in creating a plan of vision and purpose for the Gallatin/Custer Forests.

I strongly support the Plan D proposal. It provides the most protection for animals, including birds, especially for the many species that migrate in the Greater Yellowstone eco-system. All these species are already compromised by climate change and the growing human population.

Although I am 80 years old now, I still hope that we can make and keep these few remaining wild places intact for our children, grand-children, and generations to come. As the Native Americans say, we must make decisions according to what is best for "the 7th generation yet to be born."

Sincerely, Siada Weston Pierce
(LINDA WESTON PIERCE)
