Comments:

I am writing to say that I support the wilderness recommendations in Alternative D of the Revised Draft Forest Plan. However, I believe they must be improved by adding the entire 230,000 wild, roadless acres of the Gallatin Range as Recommend Wilderness in the final forest plan.

The importance for the wild Gallatin Range cannot be overstated.

This plan should prohibit all motorized and mechanized uses, and any other activities not consistent with wilderness protection in the Recommended Wilderness areas so as to preserve their wilderness qualities until Congress acts on the wilderness recommendations.

The draft plan seems to have little direction for administering the Absaroka-Beartooth and Lee Metcalf Wildernesses. The current wilderness management plans allows destructively large groups of up to 25 head of stock (horses and mules) and 15 people in most areas. Research shows that impacts increase significantly when group-sizes exceed eight head of stock and 12 people. I would hope that the Forest Service would reduce group size limits accordingly so as to protect all Wildernesses on the forest from harm.

In additon, the forest plan should put an end to ecologically destructive fish stocking in naturally fishless wilderness lakes, which significantly alters the areas' natural conditions.

Likewise the plan must address the issue of human and pack animal feces contamination of lakes and streams on the Beartooth Plateau in the Absaroka-Beartooth Wilderness. Eliminating fish stocking would likely go a long way toward solving this problem, but additional measures must be included if needed.

I have backpacked extensively in these regions and would really appreciate the wilderness remaining "wild". Thank you for your consideration in this matter.
