Comments:

My wife and I live year round on MT HWY 87 next to:

Polygon Number: HENRYS_39. I just want to express my earnest request that HENRYS_39 be designated a permanent wilderness area.

The area north of Henrys_39 just across MT HWY 287 on the North is already a Wilderness area and this would just expand an already existing wilderness area as shown attached. Henrys_39 has been previously recommended as Wilderness since the 1987 Gallatin Forest plan.

There are also many elk migrations in the affected Henrys_39 area as the picture shows attached with the accompanying website.

Finally there is a 150 year fault line (the highest activity rating in Montana) just along the east of HWY 87 in the affected Henrys_39 area (see the cited website and picture attached). To make it more personal, I took a picture of the fault line that can visibly be seen on the bottom of the last picture attached. The steepness of the Mountain also shows how little use it would be for recreational activities (though Elk can easily climb the mountain). I built my house near the HWY 87 not aware of the high earthquake rating.

See the attachment for all of the referred to documents' pictures and webcites.
